

KEYPOST

DYNAMIC SOFTWARE FOR SIGN POST AND FOUNDATION DESIGN

Who?

Traffic Management and Road Safety Engineers and Sign Manufacturers

What?

BSI accredited Structural Design software for the design of sign installations

Why?

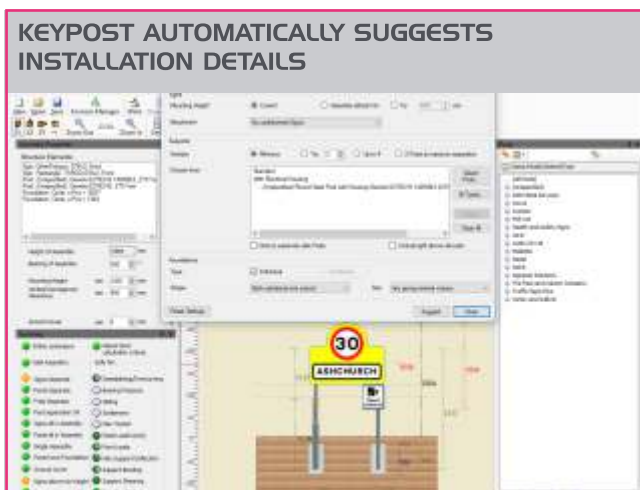

Produce and test safe sign structures to British and European Standards

WHO IS KEYPOST FOR?

KeyPOST is for traffic management and road safety engineers and sign manufacturers.

WHAT IS KEYPOST?

KeyPOST is a structural design program that allows you to design sign installations and test their stability against the effects of wind loading.

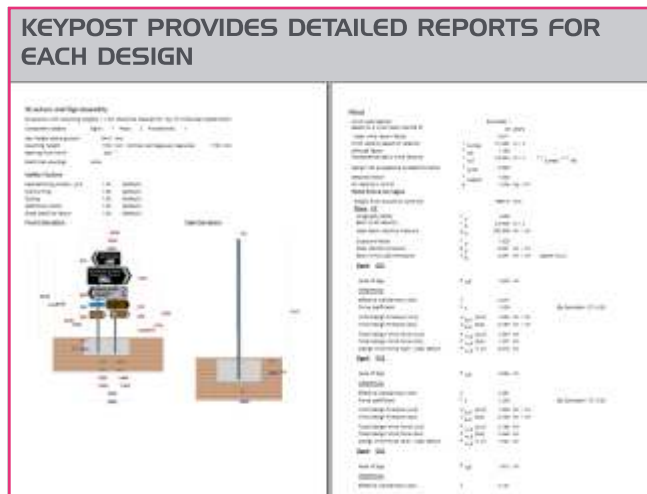

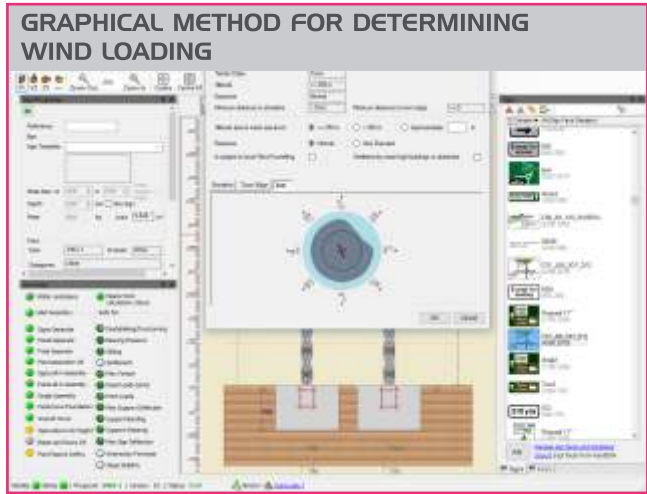

WHY CHOOSE KEYPOST?

KeyPOST offers you a range of graphic design tools for creating sign installations. Simply select your desired signs, posts or foundations from the template library and arrange them as required. Alternatively you can import an existing design from KeySIGN.

KeyPOST also offers an 'AutoPost' feature. You choose from a set of suggested structural arrangements and the software will automatically calculate the post and foundation requirements of the installation. Designs meeting passive safety standards are also possible.

KeyPOST allows the wind pressure to be set for each sign installation, in accordance with the latest National Annex to BS EN 12899-1:2007 or BS EN 1991-1-4:2005.

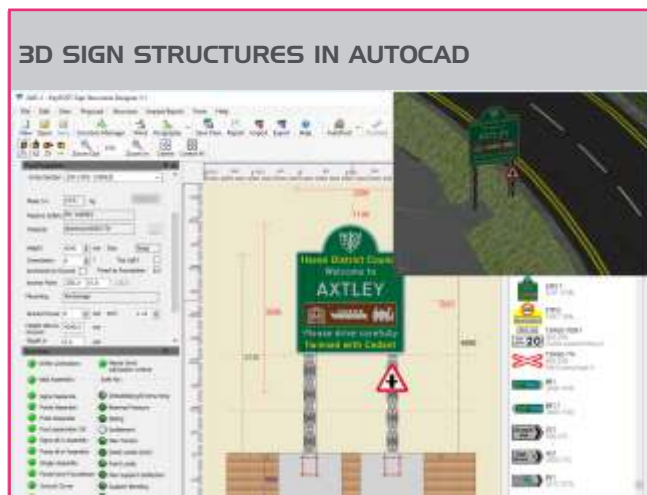

KEYPOST AT A GLANCE

- Offers graphic design tools to create and test sign installations
- Import existing designs from KeySIGN
- Calculates the post and foundation requirements of your installation
- Produces a detailed report for each design
- Full 3D output available in AutoCAD and Navisworks for BIM coordination
- Keysoft Solutions' support services include training, user group meetings and upgrades, to keep you up to date with standards and legislation

“KeyPOST provides the perfect solution for my clients needs. It gives me the ability to design with the flexibility to suit varying site conditions.”
