

# AUTOLUX

## INTELLIGENT LIGHTING DESIGN SOFTWARE

# Who?

Lighting Engineers

# What?

Design software for creating external lighting schemes

# Why?

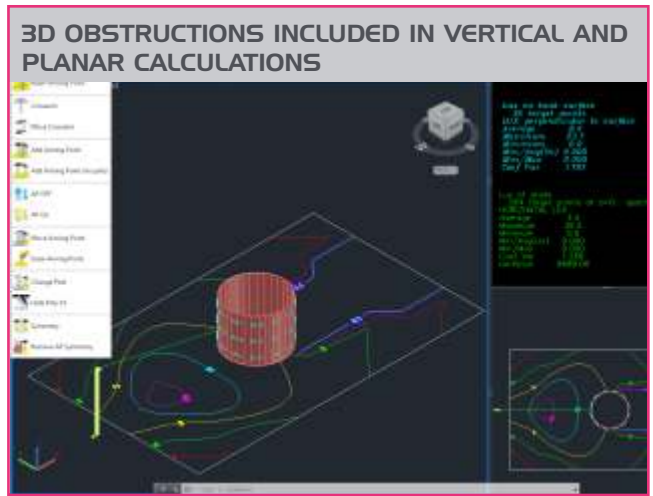

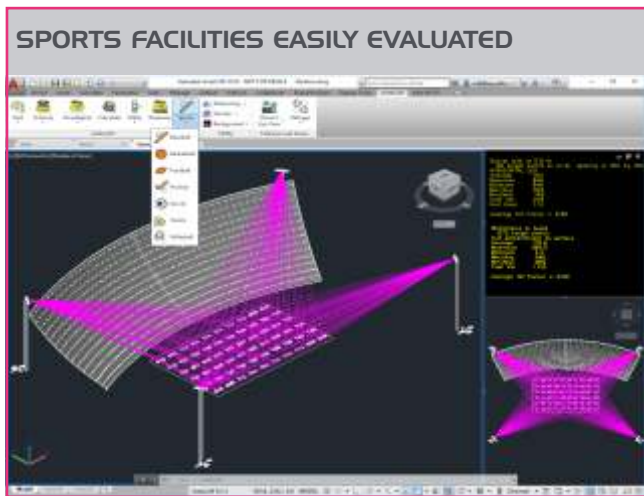

Quickly and easily create external lighting scheme designs

### WHO IS AUTOLUX FOR?

AutoLUX is designed for lighting engineers.

### WHAT IS AUTOLUX?

AutoLUX is lighting design software, for creating working drawings of proposed sports field, roadway, and other outdoor spaces.

## WHY CHOOSE AUTOLUX?

AutoLUX includes a powerful fully featured lighting calculations engine. Light levels are dynamically generated from the photometric data files supplied for your luminaire symbols, with the opportunity to share them along with your drawing.

AutoLUX helps you create sports field, roadway and other external lighting designs quickly and easily as luminaires and target points enter the drawing as CAD entities.

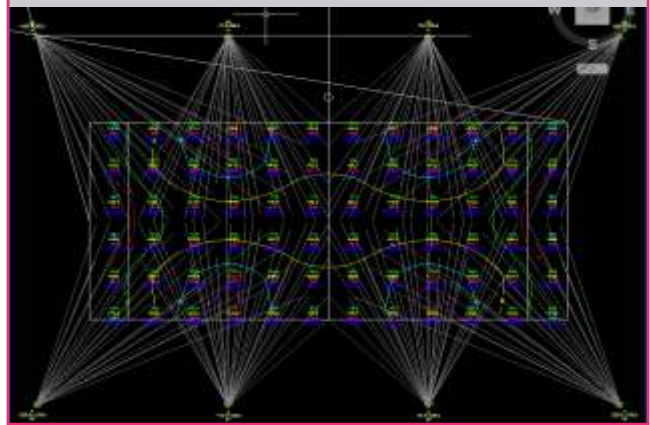

Save time with the sports shortcut which constructs field outlines of popular sports at the click of a button. The roadway shortcut constructs roadway layouts from a few input numbers - choose from: IESNA, BS5489 or CEN.

Restriction free AutoLUX retains the full power of AutoCAD leaving you free to design.

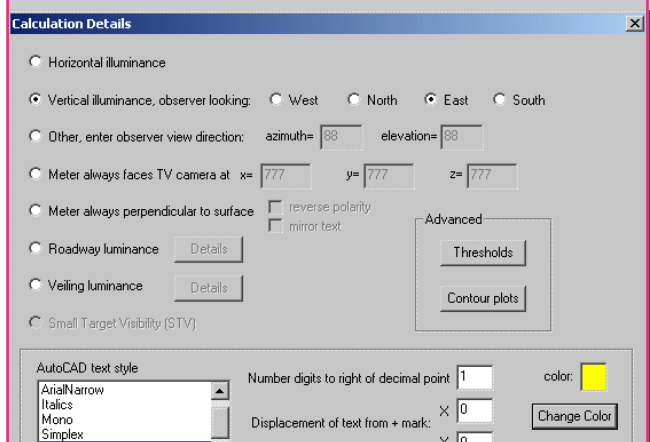

# AUTOLUX AT A GLANCE

- Accepts photometry in IES, CIBSE Tm14, EULUMDAT, CIE or INR format
- Accounts for obstructions which block light - 3DFACEs, extruded CIRCLEs, etc
- Uses information in candela files to produce legend/fixture schedule
- Contour isoplots
- Draggable iso-templates
- Keysoft Solutions support services include upgrades to your software and support via telephone, email and remote desktop
- Keep up to date with standards and legislation by attending training sessions and screen share events
